

**SINGLE-PLY
SYSTEMS, INC.**
NATIONAL ROOFING CONTRACTOR

Roofing the Nation Since 1983

SINGLE-PLY SYSTEMS, INC.

NATIONAL ROOFING CONTRACTOR

Single-Ply Systems, Inc. is a national roofing contractor specializing in white thermoplastic roofing systems.

Having applied over 75 million square feet since 1983, Single-Ply Systems, Inc. is among the largest roofing contractors in the world installing white environmentally friendly roofing systems. These are the only systems we install because they are undeniably the best.

Single-Ply Systems, Inc. offers a free roof analysis, including roof survey, infrared analysis, energy and drainage evaluation, as well as straight forward bids. You will be impressed by our Project Manager's knowledge, attention to detail and in-depth understanding of your roofing needs.

We have completed projects from Alaska to Puerto Rico and can be competitive on any size job anywhere. We use only our own experienced crews to ensure jobs get done right and are completed on time.

We've built a solid reputation of reliability by consistently meeting our customers' objectives for cost, time and quality. Our excellent performance leads to a long list of repeat clientele.

Conservative, experienced management and exceptional bonding capacity are your assurance that Single-Ply Systems, Inc. has the resources to handle your roofing project.

About Us

Management Team (left to right): Jeff Anderson, Dave Zurn, Jamie Russell, LeRoy Swanson, Joe Elder, Andy Barna, Nate Cline.

Administration & Accounting (left to right): Jeanette Russell & Lacey Bruner

ENVIRONMENTALLY RESPONSIBLE CHOICE

The Energy Star rated roof systems we install reflect ultraviolet rays and help keep the building interior cooler in the summer, reducing cooling costs. Eliminate tear off waste and cost by recovering your existing roof with sustainable white thermoplastic roofing systems. It is the environmentally responsible choice.

Manufacturers:

Single-Ply Systems installs the highest quality materials available today from some of the largest manufacturers in the nation with the longest warranties.

Application

As specialists, Single-Ply Systems has developed highly skilled crews using time-tested methods to achieve cost-saving efficiencies without sacrificing quality. Most other contractors install four or five different roofing systems and are unable to achieve our high standards.

Insulation is mechanically fastened and installed over the existing roof.

Membrane is rolled into place and then installed by mechanically fastening, adhering or ballasting.

All rooftop penetrations are heat-welded by hand to provide complete watertight application.

Preparation of the roof by vacuuming loose gravel.

Seams are heat welded to provide the strongest seam of all single ply membranes.

All perimeter walls are wrapped in their entirety to provide a complete watertight application

Weigh all the facts and you'll agree -- recovering with a thermoplastic single-ply roof installed by Single-Ply Systems, Inc. is your best option.
